Hi, I'm Rajeev Baniya,

I am skilled in modern web technologies, cloud platforms and AI tools used to build responsive and secure applications. I completed an internship as a Front-End Developer at Unicom Portal, where I contributed to developing a user-friendly web application, optimized its performance by 30% and added accessibility features to improve usability. My technical skills include JavaScript, Python, HTML/CSS, MySQL and MongoDB. I also have experience with frameworks and tools such as React.js, Next.js, Node.js, Tailwind CSS, RESTful APIs, OAuth and Firebase. Additionally, I have hands-on experience with Docker, AWS, Google Cloud Platforms and API integrations.

I have built projects that combine AI with modern web technologies. One of them is Travel AI, an AI-powered travel planner that uses Google Generative AI and Firebase for secure login and smart itinerary generation. Another is Note AI, a note-taking app that uses Gemini AI and LangChain to extract content from PDFs and manage files securely with access controls

These projects reflect my ability to build smart, full-stack applications and work effectively with APIs and cloud tools. I'm always eager to explore new technologies, take on challenging problems, and collaborate on projects that help with progress and learning.

Best regards,
Rajeev Baniya
